

**Q:** Is your configuration data stored here?

(And is that data accessible when he's out of the office?)

Where is your critical configuration data stored? In disparate documents, laptops, and servers? In some employees' heads?

When your organization's most critical information is stored in multiple, disconnected locations, it becomes difficult — if not impossible — to gain a clear view of critical IT data and systems, how they interrelate, **and how they impact your business.**

The sole employee who knows how to maintain your order management system

*Order management system is kept here*

How can you get a clear view of critical IT data and systems (and their impact on the business)?

BMC Atrium brings it all together by providing a shared set of enabling technologies that provide a single, federated configuration management database (CMDB), a business service model, and common views of IT. BMC Atrium lets you discover, connect, automate, optimize, analyze, and report on your IT enterprise — and see how it impacts your business.

The applications server that might (or might not) contain all of your HR and Sales data (well, unless you've moved it)

*HR and Sales data sits here*

*Process documentation stored here*

Your COO's laptop, which holds the spreadsheet containing *all* your process documentation (accessible only when he's in town)

You can gain control of your critical IT data with an integrated Configuration Management System.
